

High-Performance Laminated Rollstock for Flexible Packaging Converters

Engineered for Protection. Optimized for Converting Performance.

Tadbik supplies advanced laminated rollstock and reel solutions designed for flexible packaging converters and high-speed production environments.

Combining innovative material structures, advanced printing technologies, and high-performance lamination capabilities, we deliver customized flexible packaging solutions engineered for efficient downstream converting, reliable machinability, and outstanding shelf-life performance.

Product Applications

Designed for a wide range of flexible packaging needs:

Powder

Liquid

Ready meals

Wet wipes

Snacks & confectionery

Retort applications

Oxygen-sensitive

Barrier & Shelf-Life Confidence

Our multilayer laminates are engineered to protect oxygen- and moisture-sensitive products, ensuring extended shelf life and product integrity.

- Medium, High and ultra-high barrier structures
- Stable and consistent barrier performance
- Reliable sealing for demanding applications
- Suitable for special applications such as retort and coffee

Advanced Lamination Technologies

We offer a full range of lamination capabilities. This flexibility allows us to tailor each structure for performance, cost-efficiency, and regulatory compliance.

- Solvent-based lamination – for high-performance, demanding structures
- Solvent-less lamination – sustainable and efficient solutions
- Extrusion lamination – excellent sealing and barrier integration

Material Versatility

Wide range of material combinations and structures to meet diverse packaging needs and recyclability

- PET
- PP
- LDPE
- PAP
- ALU
- OPA

High-Performance Laminated Rollstock for Flexible Packaging Converters

Engineered for Protection. Optimized for Converting Performance.

Printing Excellence

High-impact shelf presence combined with production efficiency:

- Flexographic printing – high-speed and cost-effective
- Rotogravure printing – premium quality and precision
- Excellent print registration and consistency
- Matte, soft-touch, metallic, paper-touch, and selective finish options
- Reverse and surface printing capabilities
- Designed for high-impact branding in FMCG markets

Converting & Production Performance

Engineered for smooth, efficient processing on high-speed lines:

- Strong and consistent sealing performance
- Stable machinability across applications
- Controlled tear, laser micro-perforation, and mechanical perforation options
- Reliable performance from batch to batch

Packaging Formats

Optimized for flexible packaging converting applications:

- Pouches
- Sachets & stick packs
- Flow wraps
- Lidding applications
- Form-fill-seal applications
- Roll-fed packaging systems

Sustainability Options

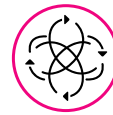

Designed for recyclable-ready packaging structures

Mono-material
recyclable structures

Solvent-less lamination
options

Reduced material
complexity

Why Tadbik

- End-to-end capabilities: materials, printing, lamination, and converting
- Deep expertise across food, pharma, and personal care markets
- Full compliance with customer and regulatory requirements
- Personalized technical and commercial support throughout the development process
- Global supply and consistent quality

Let's Build the Right Structure Together

Every product has unique requirements. Our team works closely with you to develop the optimal structure for your application – balancing barrier, machinability, sustainability, and cost.
